

Rethinking façades.

TA-FlexLine

Design profiles for maximum design freedom.

Today, façades serve more than just a technical purpose. They give buildings character and play a key role in their architectural impact.

TA-FlexLine addresses precisely this need. The façade design profiles are not restricted to rigid grids, but adapt flexibly to the specific project concept.

Through different combinations of profiles, targeted folds, colours and finishes, this creates façades that make a clear statement and give every building its own identity.

Advantages

+ Unlimited profile variety

Different geometries can be freely combined to create unique façade designs

+ Colours of your choice

Standard RAL colours and special colours available

+ Surfaces with character

A range of finishes to achieve the desired look and effect

+ Variety of materials

Aluminium, steel or stainless steel – any profile can be produced in any material

+ Element lengths of up to 4 m that can be flexibly planned

For adaptation to different façade designs
