

TA-Protect®

High-performance aluminium for surfaces that retain their colour and gloss over time.

TA-Protect® has been developed for durable roofing and cladding solutions in the most demanding outdoor conditions. The high-quality, high-performance FEVE coating protects surfaces from UV radiation, moisture, salt, chemicals and extreme temperature fluctuations. As a result, colour, gloss and surface quality are reliably maintained even after many years.

The coated aluminium strip offers impressive corrosion resistance, an easy-care surface and long-term durability, even under intense weathering. At the same time, TA-Protect® reduces maintenance and upkeep requirements, offering a cost-effective solution for professional applications in roofing and façade construction.

Advantages

- + **Gloss retention**
10–85 GE, matt to high gloss
- + **Corrosion-resistant**
EN 1396, Class 3
- + **Chemical-resistant**
E.g. chlorine, petrol, solvents, acids
- + **Easy to maintain**
Water-repellent, easy-to-clean properties
- + **Quick to repair**
Using 2-component or spray systems
- + **UV-resistant**
R_{UV}5 – for long-term outdoor use
